

Report No. 494(59/18.1/2)

Seasonal Variation in the
Operational Land Holdings
in India, 2002-03

59th Round
(January - December 2003)

National Sample Survey Organisation
Ministry of Statistics and Programme Implementation
Government of India

August 2006

Preface

The Land and Livestock Holdings survey carried out in its 59th round (January-December 2003) by the National Sample Survey Organization (NSSO) is the sixth in the series of similar surveys conducted so far by the NSSO. The objective of these surveys has been to generate basic quantitative information on the agrarian structure of the country, which is relevant to land policy. In the 59th round, information on various aspects of ownership and operational holdings was collected for both rural and urban areas. Particulars of land owned, land leased out and leased in, and types and terms of lease were collected for the study of ownership holdings. For operational holdings, data were collected on size, composition, tenurial form, land use, extent of irrigation, fragmentation of holdings and other related aspects. An inventory of livestock owned by the household on the date of survey was also taken.

The present report is the third in the series of four reports to be brought out on the basis of data collected from the latest Land and Livestock Holdings Survey. The report deals with the seasonal variation in the operation of land holdings during the agricultural year 2002-03. It presents different facets of operational holdings for the agricultural seasons *kharif* and *rabi* of 2002-03 and shows variation between two seasons, *kharif* and *rabi*, in the estimates number of operational holdings, estimated area, average operated area, number of parcels, major activity in the holding, extent of irrigation, etc. and different patterns of land use classified according to sizes of the operational holdings.

Like all regular surveys of NSSO, the geographical domain of the present survey was practically the whole of India. Information was collected from a sample of 52,265 rural households and 29,893 urban households spread over 6,638 villages and 3,764 urban blocks through personal interviews. Each sample household was visited twice, once during January-August and once during September – December, during the period of survey.

Chapter One of this report serves as the introduction. Chapter Two explains the concepts and definitions adopted in the survey. Chapter Three summarises the major findings of the survey on the seasonal variation in the land holdings. Appendix A gives the detailed survey estimates at State/UT and all-India level. Appendix B explains the sample design and estimation procedure used for the survey. The schedules of enquiry used in Visit I and Visit 2 of the survey are given in Appendix C.

The Survey Design and Research Division of the NSSO undertook the development of survey methodology as well as drafting of the report. The fieldwork was carried out by the Field Operations Division of NSSO while the data processing and tabulation work was handled by the Data Processing Division of NSSO. The Co-ordination and Publication Division of NSSO coordinated various activities pertaining to the survey.

I am thankful to the Chairman and Members of the Working Group for the NSS 59th round for their valuable guidance at various phases of work from designing of the schedules of enquiry to the preparation of this report. I am also thankful to the Chairman and Members of the Governing Council of NSSO, for providing technical guidance at various stages of survey work.

I hope the report will be useful to planners and policy makers.

Comments and suggestions from readers will be most welcome.

New Delhi
July 2006

Dr. K.V. Rao
Director General and Chief Executive Officer
National Sample Survey Organisation

Highlights

- Although both rural and urban sectors were covered in the round, seasonality being predominantly a rural agricultural phenomenon, the highlights and the report focus only on the rural sector.
- About 101 million holdings in the *kharif* season and 96 million holdings in the *rabi* season were operated during the agricultural year 2002-03.
- The total operated area was about 108 million hectares in *kharif* and 102 million hectares in *rabi*.
- The average area operated was 1.1 hectare in both *kharif* and *rabi* seasons of the agricultural year 2002-03.
- The net sown area as percentage of operated area was 87% in *kharif* and 57% in *rabi*.
- Average number of parcels per holding was 2.3 in the *kharif* season and 2.0 in the *rabi* season of the agricultural year 2002-03.
- About 36% of operated area in *kharif* and 38% area in *rabi* was irrigated during 2002-03.
- Tubewells were the most common source of irrigation in both *kharif* and *rabi* seasons of the year 2002-03.
- About 77% of *kharif* holdings and 60% of *rabi* holdings were mainly used for crop production.
- About 16% of *kharif* holdings and 32% of *rabi* holdings were mainly used for livestock rearing.

Table No.	Title	Page
1	Percentage distribution of operational holdings and area operated and number of parcels per holding by each size class of operational holding for each season	A-1- A-29
2	Number of operational holdings per 1000 operational holdings operated in kharif and/or rabi by each size class of operational holdings in kharif and rabi	A-30 – A-58
3	Per 1000 distribution of operational holdings by main use of the holding for each size class of operational holding and season	A-59 – A-116
4	Number of operational holdings per 1000 operational holdings reporting different types of agricultural production for each size class of operational holding	A-117 – A-174

Table No.	Title	Page
5	Percentage distribution of net irrigated area by major source of irrigation for each size class of operational holding and season	A-175 – A-203
6	Number of attached farm workers per reporting household by season and mode of payment for each size class of operational holding	A-204

Chapter One

Introduction

1.1 General

1.1.0 The survey on Land and Livestock Holdings carried out in the 59th round (January-December 2003) of the National Sample Survey (NSS) is the sixth in the series of similar surveys conducted so far by the National Sample Survey Organisation (NSSO). The objective of these surveys has been to generate basic quantitative information on the agrarian structure of the country, which is relevant to land policy.

1.1.1 The present report is the second in a series of four reports to be brought out on the Land and Livestock Holdings survey. The first report to be released was: "Livestock Ownership Across Operational Land Holding Classes in India, 2002-03" (Report No. 493). The reports titled "Household Ownership Holdings in India, 2003" (Report No. 491) and "Some Aspects of Operational Land Holdings in India, 2002-03" (Report No. 492) will be released very shortly.

1.2 Background

1.2.0 The first survey on land holdings was taken up by the NSS in its 8th round (July 1954 - April 1955) as part of the World Agricultural Census initiated by the Food & Agricultural Organisation (FAO) of the United Nations. In this survey, information on (agricultural) holdings was collected primarily to meet the requirements of the FAO. In addition, information on household ownership holdings was collected to provide the policy framers with the much-needed data for formulating land reforms policy for the country. A similar survey was conducted again in the 16th (July 1960 - August 1961) and 17th (September 1961 - July 1962) rounds of the NSS as a part of the World Agricultural Census Programme of 1960.

1.2.1 Since then, the NSS has been regularly conducting land holdings surveys every ten years or so. The third land holdings survey of the NSS, in its 26th round (July 1971 - June 1972), was conducted simultaneously with a survey on Debt and Investment at the instance of the Reserve Bank of India. Combining these two surveys has since been a regular feature of the rounds in which land and livestock holdings surveys have been conducted: the 37th round (January-December 1982), the 48th round (January-December 1992), and the present one.

1.3 Scope

1.3.0 In the Land and Livestock Holdings surveys of the NSSO, two types of holdings, namely, household ownership holdings and operational holdings, are enumerated by interviewing the sample households. Data are also collected on the

livestock and agricultural implements owned by households. In the present survey, however, data on agricultural implements of households were not collected, as this was done as part of another survey on “Situation Assessment Survey of Farmers”, carried out in the same round.

1.3.1 *Items of enquiry:* In this 59th round, information on various aspects of ownership and operational holdings was collected for both rural and urban areas. Particulars of land owned, land leased out, types and terms of lease formed the main body of information for the study of ownership holdings. Further, particulars of land leased in were also collected to ascertain the land possessed by households. For the operational holdings, data on size, composition, tenurial form, land use, extent of irrigation by sources, fragmentation of holding, drainage facilities and other related aspects of holdings were collected. An inventory of livestock owned by the households on the date of survey was also obtained.

1.3.2 *Geographical coverage:* The 59th round covered the whole of the Indian Union except

- (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir;
- (ii) Interior villages of Nagaland located beyond 5 km of a bus route;
- (iii) Villages in Andaman & Nicobar Islands which are inaccessible throughout the year.

1.4 Method of Data Collection

1.4.0. The information for Land and Livestock Holdings survey was collected from a sample of households by the interview method. Each sample household was visited twice during the period of survey with a gap of four to eight months. Two different schedules of enquiry were canvassed in the two visits.

1.4.1 *Survey period:* The survey period for the 59th round survey was the calendar year 2003. To reduce recall error, particulars relating to the entire agricultural year were collected by visiting each sample household twice during the survey period. The first visit to a sample household was made during the period January to August, while the second visit was made during the period September to December. The longer period for the first visit reflected the higher workload for the field staff during this visit compared to the second visit.

1.4.2 *Reference period:* Information on holdings operated during the *kharif* season of the agricultural year 2002-03 was collected in first visit, and on holdings operated during the *rabi* season, in the second visit. In addition, some general information on operational holdings with the agricultural year 2002-03 as the reference period was also collected in the second visit. This information did not, however, include the *area* of the operational holding with the entire agricultural year as reference period. Estimates of number, area, and distribution of operation holdings by size class have therefore been presented in this report separately for *kharif* and *rabi* seasons, and not with the entire agricultural year as reference period as was done in the 48th round. In

fact, all the detailed tables relating to operational holdings are given separately for *kharif* and *rabi* seasons.

1.4.3 *Sample design* : The sample design adopted for the survey was essentially a two-stage stratified design, with census villages and urban blocks as first-stage units (FSUs) for the rural and urban sectors respectively, and households as the second-stage sampling units (SSUs) in both the sectors. The selection of villages was done with Probability Proportional to Population (With Replacement), mainly based on the Census 2001 list of villages. The selection of urban blocks was done with Simple Random Sampling Without Replacement based on the Urban Frame Survey (UFS) conducted by the NSSO as an on-going activity. The details of sample design and estimation procedure adopted for the survey are given in Appendix B of this report.

1.4.4 *Sample size – first-stage units*: It is to be noted that most of the States and Union Territories participated in the NSS programme at least on an equal matching basis. The sample surveyed by the NSSO staff is known as “Central sample” and the sample surveyed by the State Government staff is termed “State sample”. For rural India, 6760 villages formed the Central sample for this round. Of these, 6638 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 3824 blocks of which 3764 were surveyed. This report is based entirely on the estimates obtained from the Central sample.

1.4.5 *Sample size – second-stage units*: 8 households were selected for survey from each sample village and urban block. In the Central sample, the actual number of households surveyed was 52265 in the rural sector and 29893 in the urban sector.

1.4.6 The total sample of first-stage units was drawn in the form of two independent and parallel samples termed sub-samples. Each sub-sample was drawn by the same sampling scheme. The present report is based on the combined estimates of the two sub-samples.

1.4.7 Table 1 shows the number of sample villages and blocks allotted for survey, and the number actually surveyed, as well as the number of households interviewed, in each State and Union Territory of the country.

1.5 Contents of the Report

1.5.1 Chapter 2 sets out the concepts and definitions adopted in the survey. Chapter 3 discusses the principal survey findings on operational holdings with special reference to their number, total and average area, number and area used for crop production, and agricultural production carried out in homestead land and outside homestead land during the *kharif* and *rabi* seasons. Both national and State-level estimates are discussed in this chapter. Appendix A presents detailed tables compiled from the survey. These tables provide the survey estimates for different size classes of operational holdings for rural areas of 27 States, as well as a combined estimate for all UTs, to be referred to as ‘Group of UTs’, and all-India

(Tables 1 to 7). Appendix B gives a detailed description of the sample design and estimation procedure used for the survey. Facsimiles of the schedules of enquiry used in Visit 1 and Visit 2 of the survey are given in Appendix C.

1.5.2 The results presented in the report are mostly in the form of rates and ratios (percentages, averages, etc.). To arrive at aggregate estimates of the relevant characteristics, the basic aggregate estimates for the number and area of operational holdings in each size class, provided in the detailed tables of Appendix A, may be used.

Table 1: Number of villages/blocks allotted and surveyed and number of households surveyed

State/UT	no. of villages		no. of blocks		sample households

*The large difference between the numbers of villages and blocks selected and the numbers surveyed in Jammu & Kashmir was mainly due to the disturbed conditions prevailing in the relevant areas.

Chapter Two

Concepts and Definitions

2.0 Major concepts and definitions of important terms used in the survey and relevant to this report are explained below:

2.1 *Household*: A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, a hotel or a hostel was treated as a cluster of households, where each individual boarder formed a separate household. If, however, some persons among them normally pooled their income for spending, the group was treated as forming a single household. Barracks of military and paramilitary forces, orphanages and vagrant-houses were excluded from the scope of the survey.

2.2 *Agricultural production*: The extended definition of agricultural production, as adopted in the survey, includes growing of field crops, fruits, grapes, nuts, seeds, tree nurseries (except those of forest trees), bulbs, vegetables and flowers both in the open and in glass houses; production of coffee, tea, cocoa, rubber, forest production in parcels of land which form part of the enumeration holding and production of livestock and livestock products, poultry and poultry products, fish, honey, rabbits, fur-bearing animals, and silk-worm cocoons.

2.3 OPERATIONAL HOLDINGS

2.3.1 *Operational holdings*: An operational holding is defined as a techno-economic unit wholly or partly for agricultural production (defined above) and operated (directed/managed) by one person alone or with the assistance of others, without regard to title, size or location. The holding might consist of one or more parcels of land, provided these are located within the country and form part of the same technical unit. In the context of agricultural operations, a technical unit is a unit with more or less independent technical resources covering items like land, agricultural equipment and machinery, draught animals, etc. Holdings used exclusively for livestock and poultry raising and for production of livestock and poultry products (primary) and/or pisciculture are considered as operational holdings whereas holdings put exclusively to uses other than agricultural production are not considered as operational holdings. Holdings operated by cooperative farms are also not considered as operational holdings.

2.3.2 A household is considered to have two operational holdings only when EITHER

- two or more members of the household independently direct/manage two distinct economic units engaged in agricultural production, even if most of the technical resources used by them are the same; OR

- there are two distinct technical units engaged in agricultural production, even if managed/directed by the same set of persons.

2.3.3 However, if a household forming a single economic unit undertakes some crop production and at the same time is engaged in livestock/poultry raising or pisciculture during the reference period, the household is considered to possess a single operational holding even if the technical unit used for crop production is distinctly different from the technical unit used for livestock/poultry raising or pisciculture. This is, indeed, a departure from the general rule. But, since it is known that in a majority of such cases, the crop production constitutes the main activity of the household and the other activities are of an ancillary nature, the above guideline is adopted as a general rule in land holding surveys of the NSS.

2.3.4 *Individual and joint holdings:* An operational holding managed by the members of a single household is called an individual holding and a holding managed by members of different households jointly is called a joint holding.

2.3.5 *Parcel:* A parcel of an operational holding is a piece of land entirely surrounded by other operational holdings or by land not forming part of any operational holding. It may consist of one or more plots.

2.3.6 *Permanent attached farm workers:* A person employed by the management of an operational holding was considered to be a permanent attached farm worker of the operational holding for an agricultural season if (i) the person was employed more or less continuously during the season in the holding and (ii) the employment was under some sort of a contract that was binding on the person to serve the holding during the period of various agricultural operations (from preparation of soil to storing of grains) in respect of the crops of the seasons.

2.3.7 *Size of an operational holding:* The inclusion of the term 'wholly or partly' in the definition of operational holding implies that once a household is identified to operate some land, all the plots possessed by the household during the major part of the reference period are taken into account in determining the size or area of the operational holding, irrespective of whether all the plots included in the holding are put to agricultural production or not. In case a household is found to possess more than one holding, plots possessed by the household during the major part of the reference period and put to uses other than agricultural production, such as house-sites, paths, buildings, etc., are also included in the operated area and all such plots are considered as part of operational holding number '1'.

2.4 OWNERSHIP AND LEASE OF LAND

2.4.0 *Ownership of land:* A plot of land is considered to be owned by a household if permanent heritable possession, with or without the right to transfer the title, is vested in a member or members of the household. Land held in owner-like possession under long-term lease or assignment is also considered as land owned.

Thus, in determining the ownership of a plot of land two basic concepts are involved, namely,

- (a) Land owned by the household, i.e., land on which the household has the right of permanent heritable possession with or without the right to transfer the title, e.g., *pattadars*, *bhumidars*, *jenmons*, *bhumi-swamis*, *rayat sithibans*, etc. A plot of land may be leased out to others by the owner without losing the right of permanent heritable possession.
- (b) Land held under special conditions such that the holder does not possess the title of ownership but has the right to long-term possession of the land (for example, land possessed under perpetual lease, hereditary tenure and long-term lease for 30 years or more) is considered as being held under owner-like possession. In States where land reform legislation has provided for full proprietorship to erstwhile tenants, the latter are considered as having owner-like possession, even if they have not paid the full compensation.

2.4.1 Sometimes a plot may be possessed by a tribal in accordance with traditional tribal rights from local chieftains or village/district council. Again, a plot may be occupied by a tenant for which the right of ownership vests in the community. In both the cases, the tribal or other individual (tenant) is taken as owner, for in all such cases, the holder has owner-like possession of land in question.

2.5 LEASE OF LAND AND RELATED CONCEPTS

2.5.0 *Lease of land*: Land given to others on rent or free by owner of the land without surrendering the right of permanent heritable title is defined as land leased out. It is defined as land leased in if it is taken by a household on rent or free without any right of permanent or heritable possession. The lease contract may be written or oral.

2.5.1 Sometimes orchards and plantations are given to others for harvesting the produce for which the owner receives a payment in cash or kind. Such transactions were not treated as “lease” for the purpose of the survey.

2.5.2 *Terms of lease*: Leasehold under crop-sharing basis means that the owner of land receives a stipulated share of the produce but he does not participate in the work, nor does he manage or direct or organise the agricultural operations on the plot of land that he has leased out. Land is considered as leased under service contract if an employer gives some land to an employee for cultivation in lieu of the services provided by him under the condition that the land can be retained so long as the employee continues to serve the employer, and no other specific terms of lease are contracted. Where the mortgager retains the ownership of land till the foreclosure of the deed but the possession of the land is transferred to the mortgagee, the land is considered as leased out under usufructuary mortgage. Sometimes, land owned by a household is looked after and operated by a close

relative. For example, a person staying away from his village may own a piece of land in the village that is looked after and used by his brother's household. All such land owned by the household but looked after and used by some relative's household, under no contract of payment of any kind to the owner, is treated as leasing-out to 'relatives under no specified terms'. All rent-free leases, other than to (or from) 'relatives under no specified terms', are considered lease 'under other terms'.

2.5.3 *Otherwise possessed land:* This is understood to mean all public or institutional land possessed by the household without title of ownership or occupancy right. The possession is without the consent of the owner. Private land (i.e., land owned by the household sector) possessed by a household without title of ownership and occupancy right is not included in this category. All private land encroached upon by the household is treated as leased-in land.

2.5.4 *Homestead land:* Homestead of a household is defined as the dwelling house of the household together with the courtyard, compound, garden, out-house, place of worship, family graveyard, guest house, shop, workshop and offices for running household enterprises, tanks, wells, latrines, drains and boundary walls annexed to the dwelling house. All land coming under homestead is defined as homestead land. Homestead may constitute only a part of a plot. Sometimes gardens, orchards or plantations, though adjacent to the homestead and lying within the boundary walls, may be located on a clearly distinct piece of land. In such cases, land under garden, orchard or plantation is not considered as homestead land.

2.6 LAND USE

2.6.1 *Forest:* This includes all area actually under forest on land classified under any legal enactment or administered as forest, whether state-owned or private. If any portion of such land was not actually wooded but put to raising of field crops, it was treated under net sown area and not under forest. All area under social and farm forestry was included in this class.

2.6.2 *Net sown area:* For a particular season, this consists of area sown with field crops and area under orchards and plantations counting only once the area sown more than once in the same season. The net sown area defined above has been further classified into area under seasonal crops, orchards and plantations.

2.6.3 *Orchards:* A piece of land put to production of horticulture crops, viz., fruits, nuts, dates, grapes etc. (other than those treated as plantation crops), is regarded as an orchard, if it is at least 0.10 hectare in size or is having at least 12 trees planted on it. It may be clarified that in the case of such fruit trees where distance between the trees is quite large, say more than six metres as in the case of mangoes, the orchard is defined according to the minimum number of 12 trees planted in it, while, in such cases, where the distance is less than six metres as in the case of bananas, papayas,

grapevines etc., the orchard is defined on the basis of the minimum area of 1/10th of an hectare.

2.6.4 *Plantations*: Area devoted to production of plantation crops, viz., tea, coffee, cashew nut, areca nut, oil palm, clove and nutmeg, was treated as area under plantation. The size restriction given for orchards was also applicable for plantations for the purpose of the survey.

2.6.5 *Area under seasonal crop*: All the land under net sown area not coming under orchards or plantations was taken as area under seasonal crops.

2.6.6 Sometimes, net sown area may consist of a piece of land put to a combination of the above three uses. In such cases, the use to which the major area of the piece of land is put was treated as the use of the piece of land.

2.6.7 *Current fallow*: This comprises cultivable area which is kept fallow during the current agricultural year. If any seedling area in the current agricultural year is not cropped again in the same year, it is also treated as current fallow.

2.6.8 *Other fallow*: All pieces of land which were taken up for cultivation in the past, but are temporarily out of cultivation for a period of more than one agricultural year but not more than five years, including the current agricultural year, are classified under other fallow.

2.6.9 *Area under non-agricultural uses*: This includes all land occupied by buildings, path etc. or under water (tanks, wells, canals etc.) and land put to uses other than agricultural uses. For the purpose of this survey, this class of land has been further divided into two classes:

Water bodies: All pieces of land which are perennially under water is defined as water bodies, provided that no crop is raised on them.

Other non-agricultural uses: All pieces of land put to other non-agricultural uses, viz., buildings, roads, railways, paths etc. are classified under land put to other non-agricultural uses.

2.6.10 *Other uses*: This includes all land coming under rest of the classes of standard nine-fold classification, viz., 'culturable waste', 'miscellaneous tree crops and groves not included in net sown area', 'permanent pastures and other grazing land' and 'barren and unculturable waste'.

2.6.11 *Drainage facility*: A plot of land was considered to have drainage facility if there existed some method of removal of excess water from the surface of land, from the upper layers of soil or sub-soil by artificial means for the purpose of making (a) non-producing wet land productive and (b) producing wet land more productive. Natural drainage, i.e. normal outflow of excess water from the plot of land by virtue of its position, was not considered as drainage facility.

2.6.12 *Irrigation*: Irrigation was considered as a device of purposively providing land with water, other than rain water, by artificial means for crop production.

2.7 REFERENCE PERIOD, SEASON

2.7.1 *Reference period:* Most data were collected with season as reference period – *kharif* season of 2002-03 during the first visit of the survey, and *rabi* season of 2002-03 during the second visit. In addition, for each plot owned or possessed by the household on the date of survey, the size of the plot and, for plots leased in or leased out by the household, particulars of the lease agreement were ascertained. Some general information on operational holdings identified with the entire agricultural year of 2002-03 as reference period was also collected but this did not include the size of the operational holding for 2002-03. Nor could the size of the operational holding for the agricultural year be derived from the seasonwise data collected.

2.7.2 *Season:* The crop seasons are generally identified by the months of harvesting of a crop during a normal year. For the purpose of the survey, *kharif* season was taken to include both early *kharif* (i.e. autumn) and late *kharif* (i.e. winter). Similarly, the *rabi* season included both *rabi* and *Zaid rabi* (i.e. summer). Generally, the harvesting months of the early *kharif* and the late *kharif* seasons extend over August to October and November to January, respectively. Again, the crops of *rabi* and *Zaid rabi* seasons are harvested during February to April and May to June, respectively. Thus, in general, the crops which are harvested during August to January were considered as crops of the *kharif* season and those harvested during February to June were treated as crops of the *rabi* season. However, there are departures from this general rule in case of some crops grown in certain regions. For example, rice in Tamil Nadu is harvested thrice and the three harvests are termed autumn, winter and summer crops. But the respective harvesting periods of the three crops are September to February, January to April and May to June. Though the periods of harvesting of first and second crops are spread over longer periods than those of the usual autumn and winter rice crops, the season for the autumn and winter paddy were taken as the *kharif* season. Similarly, the autumn and the winter paddy in Karnataka, where these crops are harvested during September to December and November to March, were considered as *kharif* crops. However, the crop seasons for the principal crops, given as part of the general guidelines issued for ascertaining the seasons of an agricultural operation in this survey, are listed below:

sl. No.	crop	season	sl. no.	crop	season
1.	Rice	Kharif, Rabi (summer)	9.	Sugarcane	Kharif
2.	Wheat	Rabi	10.	Sesamum	Kharif, Rabi
3.	Jowar	Kharif, Rabi	11.	Groundnut	Kharif
4.	Bajra	Kharif	12.	Linseed	Rabi
5.	Maize	Kharif	13.	Castor	Kharif
6.	Ragi	Kharif	14.	Cotton	Kharif
7.	Barley	Rabi	15.	Tobacco	Kharif
8.	Gram	Rabi	16.	Jute	Kharif

2.7.3 Since most of the principal crops are grown in only one season, there is little difficulty in ascertaining the crop season of a particular agricultural operation. Nevertheless, emphasis was laid on the need to exercise caution while determining the crop season of the crops grown in both *kharif* and *rabi*. In general, the crop season of such a crop should be determined on the basis of its months of harvesting. However, it has to be ensured that all the crops, whether principal or not, grown during the agricultural year 2002-03 are duly considered in either *kharif* or *rabi* season.

2.7.4 For land without crop, July to December 2002 was treated as *kharif* season and January to June 2003 as *rabi* season.

2.7.5 A plot constituted exclusively of an orchard or a plantation (either of perennial crops, like coconut, arecanut, tea etc., or of fruit plants and trees, like orange, mangoes, vines etc., which are usually harvested in only one season) is considered as being operated in both the seasons, provided some trees/ plants remain standing on the land for the major part of each season.

2.7.6 A plot engaged only in agricultural production relating to livestock, poultry, pisciculture etc., i.e. activities other than crop production, is treated as being operated for as long as it continued to carry out the activity. In other words, a plot exclusively used for livestock is considered as being operated in both the seasons provided some livestock is maintained in the major part of each season. In such cases, whether or not the plot produces any livestock product during a season, it is considered to be in operation.

Chapter Three

Summary of Findings

3.0.1 The Land and Livestock Holdings Survey (LHS) of NSSO is one of the principal sources of information on ownership of land and agriculturally operated land in the country. It provides estimates of two basic distributions of land holdings, viz., distribution of land owned by the households and that of land operated. The present report gives the survey results relating to operational holdings for the agricultural seasons *kharif* and *rabi* of 2002-03. All the results given in the report focus *only on the rural sector* as seasonality is predominantly rural agricultural phenomenon.

3.0.2 The major findings of the enquiry on seasonal operation of land are summarised in this chapter. To start with, the discussion deals with the seasonal aspects of operational holdings and their broad features. Next, it compares the estimates of seasonal operation of holdings of the current round with those of the earlier round. The nature of seasonal operation of holdings is then examined in some detail.

3.1 FEATURES OF OPERATIONAL HOLDINGS IN KHARIF AND RABI

3.1.1 An operational holding is a techno-economic unit used wholly or partly for agricultural production and is operated (directed or managed) by one person alone, or with assistance of others, without regard to the title, size and location.

3.1.2 As distinct from household ownership holding, which is restricted to area owned by one or more members of the household, operational holding encompasses all land either owned, leased in or otherwise possessed, under physical possession of the techno-economic unit. A unit with more or less independent technical resources for agricultural operations like land, agricultural equipment and machinery, draught animals, etc. was considered to be an operational holding if some agricultural production was carried out on any part of the land under its possession during the reference period. The present survey, effectively, had two different reference periods, viz. the two crop seasons *kharif* and *rabi* of the agricultural year 2002-03, for the identification of an operational holding.

Statement 1: Operational holdings in kharif and rabi seasons of agricultural year 2002-03

item	kharif	rabi
1. Number of operational holdings (mill.)	101	96
2. Operated area (mha.)	108	102
3. Average area operated (ha.)	1.1	1.1
4. Net sown area as percentage to area operated during the season	87%	57%
5. Percentage of holdings used mainly for crop production	77%	60%

Estimates of item 4 for are taken from NSS Report no. 492: Some Aspects of Operational Land Holdings in India, 2002-03, which will be released very shortly. In item 5, the word "mainly" means where crop production makes maximum contribution among different activities of agricultural production of the income during the season of the given techno-economic unit.

3.1.3 The crop seasons are generally identified by the months of harvesting of a crop during a normal year. In the present report, *kharif* and *rabi* seasons are similarly defined. *Kharif* includes both early (i.e. autumn) and late (i.e. winter) *kharif* seasons and *rabi* includes both *rabi* and *zaid rabi* (i.e. summer) seasons.

3.1.4 Area under an operational holding is called its operated area. For the present survey, the area of an operational holding for the major part of the reference period was taken as its *operated area*. Thus, the operated area of an operational holding of a season refers to the area operated for the major part of the season.

3.1.5 *Number of holdings in different seasons and area operated:* Statement 1 shows that, in the agricultural year 2002-03, there were 101 million operational holdings in the *kharif* season and 96 million in the *rabi* season in rural India. The total area operated during *kharif* was 108 million hectares (mha) and 102 mha in *rabi* and the average size of an operational holding was 1.1 hectare in both *rabi* and *kharif*.

Statement 2: Estimated area operated in some major States for each season of the agricultural year 2002-03

State	estd. area operated (mha) in	
	kharif	rabi
Andhra Pradesh	8.9	8.1
Assam	2.4	2.2
Bihar	4.7	4.8
Gujarat	6.4	5.9
Haryana	2.7	2.5
Himachal Pradesh	0.7	0.7
Jammu & Kashmir	1.0	1.0
Karnataka	6.6	6.1
Kerala	1.1	1.2
Madhya Pradesh	12.0	12.1
Maharashtra	12.1	10.5
Orissa	3.5	3.0
Punjab	2.6	2.7
Rajasthan	14.3	13.9
Tamil Nadu	3.6	3.2
Uttar Pradesh	13.8	14.4

West Bengal	3.7	3.6
all-India	107.6	102.4

3.1.6 *Net sown area*: Area operated by a holding represents the area covered by the holding. Thus, operated area for a season does not necessarily represent the scale of actual operation during the season. Instead, the net sown area is a better indicator, as it reflects the extent of land use for the crop-production activity of a holding and crop production is the main use of an overwhelming majority of holdings. The details of net sown area have been discussed in the report on 'Some Aspects of Operational Holdings in India, 2002-03'. However, about 87% of operated area in *kharif* and 57% of operated area in *rabi* were used for crop production in the agricultural year 2002-03. Although there is little variation in the average size of holding between seasons, the variation in average size of holding among the States is considerable. On one side, there are States where average size of an operational holding is in the range 1.7 - ha 2.4 ha (Rajasthan (2.4), Maharashtra (1.7) and Madhya Pradesh (1.7)) and on the other, there are States with very little average size of holding (0.4 ha - 0.6 ha), viz., Kerala, West Bengal and Bihar (refer Statement 3, *kharif*). This variation is, of course, largely a reflection of the varying population pressure on the land in different States.

Statement 3: Average size of operational holding in some major States for each season of the agricultural year 2002-03

State	average size (ha)	
	kharif	rabi
Andhra Pradesh	1.3	1.5
Assam	0.7	0.7
Bihar	0.6	0.6
Gujarat	1.6	1.6
Haryana	1.3	1.2
Himachal Pradesh	0.7	0.7
Jammu & Kashmir	1.0	1.0
Karnataka	1.4	1.5
Kerala	0.4	0.4
Madhya Pradesh	1.7	1.8
Maharashtra	1.7	1.7
Orissa	0.7	0.8
Punjab	1.3	1.3
Rajasthan	2.4	2.4
Tamil Nadu	0.8	0.7
Uttar Pradesh	0.8	0.8
West Bengal	0.4	0.4
all-India	1.1	1.1

3.2 CHANGES OVER LAST TWO DECADES

3.2.1 Data on operational holdings are being collected regularly by the NSSO since its eighth round (1954-55). So far, six land holding surveys, including the present one, have been conducted. Besides the present survey, separate estimates for the

two seasons are, however, available only for the 37th round (1981-82) and the 48th round (1991-92).

Statement 4: Estimates of certain key characteristics of operational holdings in kharif and rabi seasons from Land Holding Surveys of NSS: 1981-82, 1991-92 and 2002-03

item	1981-82		1991-92		2002-03	
	kharif	rabi	kharif	rabi	kharif	rabi
1. Number of holdings (mill.)	73.36	72.98	89.30	80.68	101.27	95.69
2. Area operated (mha.)	120.52	105.17	124.33	110.44	107.65	102.45
3. Average area operated (ha.)	1.6	1.4	1.4	1.3	1.1	1.1
4. Percentage of holdings used mainly for crop production (incl. plantation & orchards)	87%	76%	82%	74%	81%	64%
5. Average number of parcels	4.0	3.9	3.1	2.7	2.3	2.0

Source of estimates of 37th round and 48th round: NSS Report No. 344 and 414.

3.2.2 Statement 4 gives the basic estimates relating to *kharif* and *rabi* operational holdings of the LHSs of 37th, 48th and the present round. During this period, both the numbers of *kharif* and *rabi* holdings have undergone a rapid rise. As in 1991-92, it was the *kharif* season that saw a larger number of operational holdings than the *rabi* season. In 2002-03, the number of *rabi* holdings was 94% of the number of *kharif* holding, compared to 90% in 91-92. There were 28 million more *kharif* holdings and 23 million more *rabi* holdings in 2002-03 than in 1981-82.

3.2.3 *Change in area operated:* The operated area of both *kharif* and *rabi* seasons fell considerably during the decade. The total area of the *kharif* holdings, which initially rose from 121 to 124 mha during 1981-82 to 1991-92, fell to 108 mha in 2002-03. A similar pattern is observed for *rabi* holdings too: the figures being 105 mha, 110 mha and 102 mha during the periods 1981-82, 1991-92 and 2002-03 respectively. However, the estimates of the present survey are in agreement with the long-term trend of decline in area operated observed since 1960-61 (see NSS Report No. 492).

3.2.4 *Declining size of holdings:* The consequence of rapid growth in number of holdings with a decline in area operated is clearly shown by the estimates of average area operated per holding given in Statement 3. During the last decade, the average size of a *kharif* holding has declined from 1.4 to 1.1 hectares and that of a *rabi* holding has declined from 1.3 ha to 1.1 ha.

3.2.5 *Holdings for crop production:* Statement 4 reveals that there is a fall in the percentage of holdings mainly used for crop production. The fall in the percentage is seen to be more pronounced for the *rabi* season. With the growing diversification in agriculture, more and more holdings are being mainly used for activities other than crop production.

3.2.6 *Parcels:* Fragmentation of holdings in Indian agriculture has always been a serious bottleneck in effective agricultural planning aimed at increasing agricultural productivity. From NSS estimates of average number of parcels in each season, a steady decline in the average number of parcels is observed for both *kharif* and *rabi*. The average number of parcels has declined from 4.0 per operational holding to 2.3 in *kharif* and from 3.9 to 2.0 in *rabi* between 1981-82 and 2002-03.

3.3 SEASONAL USE OF HOLDINGS

3.3.1 The following discussion deals with different uses of operational holdings, in terms of operated area, use of irrigation and major agricultural activity of the holdings.

3.3.2 Statement 5 gives the percentage of irrigated area in *kharif* and *rabi* for the agricultural year 2002-03 for the 17 major States and all-India for rural India. The percentage of irrigated area in operated area is found to be 36% in *kharif* and 38% in *rabi*. The States of Punjab, Haryana, Bihar and Uttar Pradesh had more than 60% irrigated area in both *kharif* and *rabi* season of the agricultural year 2002-03, while Tamil Nadu showed more than 60% irrigated area only in *kharif*.

3.3.3 *Inter-state variation:* The pattern of variation in area operated and area cultivated with irrigation differs across the country. Statement 5 shows that there was very little seasonal variation in the percentage of irrigated area in Himachal Pradesh, Gujarat, Kerala and Punjab. At the other end, seasonal variation was 10 percentage points or more in Tamil Nadu, Andhra Pradesh, Madhya Pradesh, Uttar Pradesh and Jammu and Kashmir. Turning to differential in *kharif-rabi* allocation in aggregate operated area across States, Madhya Pradesh and Andhra Pradesh are found at the higher end while Himachal Pradesh and Jammu and Kashmir showed no variation at all.

Statement 5: Percentage of irrigated area and operated area in *kharif* and *rabi* of the agricultural year 2002-03

State	% irrigated area		operated area (mha)	
	<i>kharif</i>	<i>rabi</i>	<i>kharif</i>	<i>rabi</i>
Andhra Pradesh	34	19	8.9	8.1
Assam	6	11	2.4	2.2
Bihar	70	74	4.7	4.8
Gujarat	31	30	6.4	5.9
Haryana	70	80	2.7	2.5
Himachal Pradesh	16	16	0.7	0.7
Jammu & Kashmir	26	16	1.0	1.0
Karnataka	23	19	6.6	6.1
Kerala	22	21	1.1	1.2
Madhya Pradesh	25	41	12.0	12.1
Maharashtra	28	22	12.1	10.5
Orissa	18	10	3.5	3.0
Punjab	95	94	2.6	2.7
Rajasthan	15	20	14.3	13.9
Tamil Nadu	61	41	3.6	3.2
Uttar Pradesh	67	79	13.8	14.4
West Bengal	43	50	3.7	3.6
all-India	36	38	107.6	102.4

3.3.4 *Sources of irrigation:* Statement 6 gives the percentage of operated area irrigated in *kharif* and *rabi* seasons by source of irrigation. The estimates of operated area and the irrigated area used for the statement are based on the data collected for the individual seasons of the agricultural year 2002-03.

Statement 6: Percentage distribution of irrigated area by major source of irrigation for the major states of 2002-03 by seasons

State	Season	% distribution of irrigated area by major source						
		canal	tank	tube-well	well	others	not reported	all
Andhra Pradesh	Kharif	12	3	12	6	1	0	34
	Rabi	4	2	9	4	1	0	19
Assam	Kharif	2	0	2	0	2	0	6
	Rabi	2	0	5	1	3	0	11
Bihar	Kharif	11	1	53	0	4	0	70
	Rabi	11	1	59	0	3	1	74
Gujarat	Kharif	5	0	15	11	0	0	31
	Rabi	4	0	19	7	0	0	30
Haryana	Kharif	18	1	51	0	0	0	70
	Rabi	17	1	61	0	0	0	80
Himachal Pradesh	Kharif	8	1	3	0	3	0	16
	Rabi	7	1	3	1	3	0	16
Jammu & Kashmir	Kharif	14	0	1	0	10	0	26
	Rabi	9	0	2	0	5	0	16
Karnataka	Kharif	8	1	8	4	2	0	23
	Rabi	7	1	7	4	1	0	19
Kerala	Kharif	8	1	2	8	3	0	22
	Rabi	7	1	2	8	3	0	21
Madhya Pradesh	Kharif	2	1	7	12	3	0	25
	Rabi	4	2	17	15	3	0	41
Maharashtra	Kharif	4	1	3	17	3	0	28
	Rabi	3	0	2	12	3	0	22
Orissa	Kharif	14	1	0	0	2	1	18
	Rabi	8	1	0	1	1	0	10
Punjab	Kharif	8	1	86	0	0	0	95
	Rabi	8	1	85	0	0	0	94
Rajasthan	Kharif	4	0	6	4	0	0	15
	Rabi	5	0	11	4	0	0	20
Tamil Nadu	Kharif	10	6	14	27	3	0	61
	Rabi	3	1	14	22	1	0	41
Uttar Pradesh	Kharif	11	1	53	0	1	0	67
	Rabi	13	1	63	3	1	0	79
West Bengal	Kharif	10	2	24	2	5	0	43
	Rabi	9	3	30	2	6	0	50
All India	Kharif	8	1	19	6	2	0	36
	Rabi	6	1	23	6	2	0	38

3.3.5 It is seen that 36% and 38% of the operated area in the rural India was irrigated during the *kharif* and *rabi* seasons respectively in the agricultural year 2002-03. Tubewells constituted the most prevalent source of irrigation in both the seasons but accounted for a greater share (23%) in the *rabi* season than in the *kharif* season (19%). Next in importance were canals (8% in *kharif* and 6% in *rabi*) and wells (6% each in *kharif* and *rabi*).

3.3.6 *Inter-state variation in sources of irrigation:* In all four of the major States with the highest levels of irrigation, viz. Punjab, Haryana, Bihar and Uttar Pradesh, tube-wells were reported to be the major source of irrigation in a major part of the irrigated area for both the seasons. In general, there was little difference between areas irrigated by tube-wells during the two seasons in these States.

3.3.7 In Punjab, Haryana, Bihar and Uttar Pradesh, canals were the second most prevalent source of irrigation in both the seasons. Particularly in Haryana, they were as important a source of irrigation as the tubewell in the *rabi* season. Canals were an important source of irrigation in Andhra Pradesh, Tamil Nadu and West Bengal as well.

3.3.8 Among the other sources of irrigation, wells covered a substantial part in Tamil Nadu, Gujarat, Maharashtra and Madhya Pradesh. In all these States, and particularly in Tamil Nadu, they served a larger area in *kharif* than in *rabi*.

3.4 OPERATIONAL HOLDINGS BY MAJOR ACTIVITY IN *KHARIF* AND *RABI*

3.4.1 The operational holdings were separately classified according to the major agricultural activity pursued in them during *kharif* and *rabi* seasons of the agricultural year 2002-03. Among the multiple agricultural activities undertaken on the holding, the activity generating the maximum contribution to income during the season was considered the major activity of the holding. The list of agricultural activities used for classification was:

- (i) crop production
 - (a) vegetables
 - (b) other than vegetables
- (ii) production from horticulture and orchards
- (iii) production from plantation:
 - (a) forestry
 - (b) others
- (iv) livestock
- (v) poultry
- (vi) pisciculture
- (vii) others

3.4.2 The distribution of holdings by the detailed major activity ('main use') classification is given separately for *kharif* and *rabi* seasons in Table 3 of the Appendix. For the purpose of the present discussion, percentage of holdings falling

in certain major activity classes have been merged together and shown under the broader classes so formed. The details of broader classes are given below:

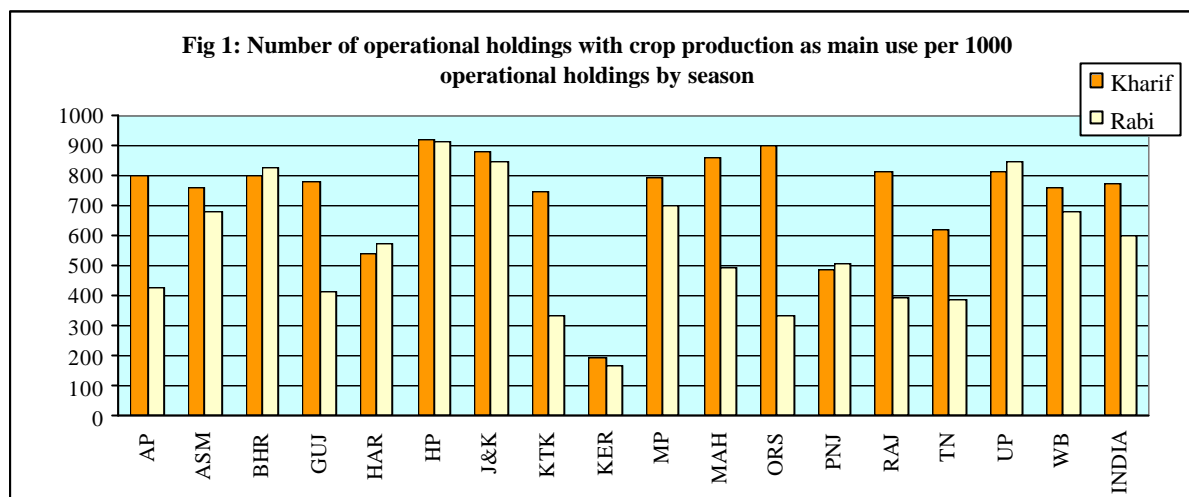

broad class	constituent detailed classes
1. crop production	(i) vegetables (ii) other than vegetables
2. plantation & orchards	(i) production from horticulture crops/ orchards (from both forestry & others)
3. livestock	livestock
4. poultry	poultry
5. others	(i) pisciculture (ii) others

3.4.3 Statements 7 and 7-1 give the percentage composition of operational holdings by their major activity at all-India level for agricultural year 2002-03 and 1991-92 respectively, while Statement 8 provides the same for States for agricultural year

Statement 7: Percentage distribution of 2002-03 holdings by major activity in kharif and rabi			Statement 7-1: Percentage distribution of 1991-92 holdings by major activity in kharif and rabi		
main use	kharif	rabi	main use	kharif	rabi
crop production	77	60	crop production	77	69
plantation & orchards	4	5	plantation & orchards	4	5
livestock	16	32	livestock	11	16
poultry	2	2	poultry	2	2
others	1	1	others	6	8
all	100	100	all	100	100

2002-03. In 2002- 03 crop production was reported to be the major activity of 77 percent of the holdings in *kharif* and 60 percent in *rabi*. The next in importance was livestock rearing reported by 32 percent of the holdings in *rabi* and 16 percent during *kharif*. The percentage of holdings with a major part of their income coming from orchards and plantation remained more or less unchanged during the year. There was marginal change in this respect for the activity of poultry raising between the two seasons. The pattern of major activities observed in *kharif* season was almost similar in both 1991-92 and 2002-03, except livestock farming which rose from 11 to 16%.

3.4.4 *Inter-State Variation in Major Agricultural Activity*: Among multiple agricultural activities, crop production dominated in both the seasons, but more so in *kharif* than in *rabi*. It was reported by more than 70 percent of the operational holdings in *kharif* in 13 out of 17 states considered in Statement 8 and by more than 50 percent of the holdings in *rabi* in 9 out of 17 states. In Bihar, Jammu and Kashmir, Uttar Pradesh

and Himachal Pradesh crop production was reported to be the major activity by more than 70 percent of the holdings in both the seasons. Kerala was an exception in the sense that plantation and orchards was reported to be the major activity by more than 70 percent of the holdings in both the seasons. While *kharif* season was dominated by crop production in most States, *rabi* season offered greater variability in major activity across States. Livestock rearing was reported by more than 50 % of the operational holdings during *rabi* in Gujarat, Orissa and Rajasthan. It was a major activity for between 40 and 50 per cent of holdings for six more States (Andhra Pradesh, Haryana, Karnataka, Maharashtra, Punjab and Tamil Nadu) during *rabi*, and for Punjab and Haryana, during *kharif* as well. From the detailed tables in Appendix A, it can also be seen that in most States, livestock rearing was reported by a significant proportion of holdings only in size groups of less than 0.04 hectares in both the seasons.

Statement 8: Per 1000 distribution of operational holdings by broad class of main use for major States in each season of 2002-03

State	crop production		plantation and orchard		livestock		poultry		others	
	kharif	rabi	kharif	rabi	kharif	rabi	kharif	rabi	kharif	rabi
Andhra Pradesh	801	428	29	51	134	429	15	37	21	55
Assam	757	679	22	30	117	190	97	95	7	6
Bihar	800	824	8	5	174	153	13	12	5	6
Gujarat	779	415	9	9	206	555	3	10	3	11
Haryana	542	570	1	1	437	419	5	1	15	9

Rajasthan	815	395	9	7	167	588	3	3	6	7
Tamil Nadu	619	390	89	114	255	442	27	45	10	10
Uttar Pradesh	810	846	11	6	170	140	1	2	8	6
West Bengal	760	677	24	23	153	224	38	45	25	31
All India	773	597	42	47	160	319	15	23	10	14

Statement 9: Seasonwise percentages of operational holdings reporting specific types of agricultural activity

Homestead land		
Activity	% of ohs	
	Kharif	Rabi
Cultivation in kitchen garden	13.5	10.1
Livestock holding	62.6	70.8
Poultry raising	11.7	10.6
Other agricultural production	6.0	5.4
Any agricultural activity	73.4	79.8

Outside homestead land		
Activity	% of ohs	
	Kharif	Rabi
Orchard	3.8	3.6
Plantation	4.2	4.0
Raising field crops	72.5	56.4
Pisciculture	1.1	1.1
Other agricultural production	9.7	7.6
Any agricultural activity	78.1	62.4

3.4.5 Statement 9 shows operational holdings according to types of agricultural activity carried out by them (a) on homestead land; and (b) outside homestead land. Livestock holdings were dominant on homestead land while operational holdings raising field crops occupied the highest share on land outside homestead land. At the all-India level, percentage of operational holdings raising field crops outside homestead land fell from about 72% during the *kharif* season to 56% during the *rabi* season. As expected, there was little seasonal variation in number of holdings for orchards, plantations, or pisciculture. The percentage of operational holdings reporting livestock farming on homestead land was 71% during the *rabi* season compared to 63% during the *kharif* season.

Appendix A

Note: Sample household at State-level is too small to yield reasonable estimates at the State level. Hence, only all-India estimate of table 7 is provided.

Appendix B

Appendix B

Sample Design and Estimation Procedure

1. Geographical coverage: The survey covered rural areas of the whole of the Indian Union except (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir, (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

2. Period of survey: The survey period of this round was January to December 2003.

3. Visits: There were four subjects of enquiry in the 59th round of NSS: Land and Livestock Holdings, Debt and Investment, Consumer Expenditure, and Situation Assessment Survey (SAS) of Farmers. With the exception of consumer expenditure, all the enquiries required two visits to each sample household for collection of data: one during January to August and the other during September to December. Accordingly, each sample first-stage unit (village or block) was visited twice by the investigator to whom it was allotted. A small proportion of households could not be surveyed a second time due to varying reasons; for these, only one set of data could be collected. Some items of information were in any case collected in the first visit only; these included general household characteristics, age, sex, educational level and other characteristics of household members. Also, importantly, information on livestock owned was collected only in the first visit. The field work during the first visit included the canvassing of the listing schedule (Sch. 0.0) and selection of the sample households.

4. Sub-rounds: The survey period of the round was divided into two sub-rounds. Sub-round one consisted of the first half of the survey period of each visit while sub-round two consisted of the remaining period. Equal numbers of sample villages/blocks were allotted to each sub-round and a village/block was normally surveyed in the sub-round to which it is allotted. Because of arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

5. Participation of States: All the States and Union Territories except Andaman & Nicobar Islands, Dadra & Nagar Haveli and Lakshadweep participated at least on an equal matching basis. The following was the matching pattern of the participating States/UTs.

Nagaland (Urban)	: triple
J & K , Manipur & Delhi	: double
Goa, Maharashtra (Urban)	: one and half
Remaining States/UTs	: equal

6. Sample design

6.1 Broad design: A stratified multi-stage design was adopted for the 59th round survey. The first-stage units (FSU) were the census villages (*panchayat* wards in Kerala) in the rural sector and UFS blocks in the urban sector. In both sectors, the ultimate stage units were households. In large villages/ blocks, an intermediate stage unit called hamlet-group/ sub-block was also involved.

6.2 Sampling frame for first-stage units: The list of villages (*panchayat* wards for Kerala) as per Population Census 1991 was used as sampling frame in rural areas; for urban areas, the latest UFS frame was used.

6.3 Stratification

6.3.1 Rural Sector: Two *special strata* were formed at the State/ UT level:

Stratum 1: all FSU's with population between 0 to 50 and

Stratum 2: FSU's with population more than 15,000.

6.3.1.1 Special stratum 1 was formed whenever at least 50 such FSU's were found in a State/UT. Similarly, special stratum 2 was formed if at least 4 such FSU's were found in a State/UT. Otherwise, such FSU's were merged with the general strata.

6.3.1.2 From FSU's other than those covered under special strata 1 & 2, *general strata* were formed, their numbering starting from 3 onwards. Each district of a State/UT was normally treated as a separate stratum. However, if the census rural population of the district was greater than or equal to 2 million as per Population Census 1991 or 2.5 million as per Population Census 2001, the district was split into two or more strata by grouping contiguous tehsils. However, in Gujarat, some districts were not wholly included in an NSS region. In such cases, the part of the district falling in each NSS region constituted a separate stratum.

6.3.2 Urban Sector: In the urban sector, strata were formed within each NSS region on the basis of size class of towns as per Population Census 2001. The stratum numbers and their composition (within each region) are given below.

stratum 1 :	all towns with population less than 50,000
stratum 2 :	all towns with population 50,000 or more but less than 2 lakhs
stratum 3 :	all towns with population 2 lakhs or more but less than 10 lakhs
stratum 4, 5, 6,... :	each city with population 10 lakhs or more

The stratum numbers remained as above even if, in some regions, some of the strata did not exist.

6.4 Total sample size (FSU's): 6784 villages and 3824 urban blocks were allocated at all-India level on the basis of investigator strength in different States/UTs for the Central sample. 6638 villages and 3764 urban blocks were ultimately surveyed. In all 82158 households were interviewed.

6.5 Allocation of total sample to States and UTs: The total number of sample FSU's was allocated to the States and UTs in proportion to provisional population as per Census 2001 subject to the availability of investigators, so as to ensure more or less uniform workload.

6.5.1 Allocation of State/UT level sample to rural and urban sectors: State/UT level sample size was allocated between the rural and urban sectors in proportion to provisional population as per Census 2001 with 1.5 weightage to the urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu, etc. would not exceed the rural sample size. The earlier practice of giving double weightage to urban sector was modified considering the fact that two important subjects of enquiry (Land and

Livestock Holdings and Situation Assessment Survey of Farmers) were rural-based and there had been considerable growth in urban population over the years. More FSU's were, however, allocated to the rural sector of Meghalaya state sample at the request of the DES, Meghalaya.

6.5.2 Allocation to strata: Within the rural area of a State/UT, the sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 2 with a minimum sample size of 2. However, a multiple of 4 FSU's was allocated to a stratum wherever possible.

6.6 Selection of FSU's: In all the strata except for stratum 1, FSU's were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per Population Census 1991. In stratum 1 of the rural sector and in all the strata of the urban sector, selection was done using Simple Random Sampling Without Replacement (SRSWOR). Samples were drawn in the form of two independent sub-samples in both rural and urban sectors.

6.7 Selection of hamlet-groups and households

6.7.1 Formation of hamlet-groups/ sub-blocks: Large villages/blocks having approximate present population 1200 or more were divided into a suitable number of hamlet-groups/sub-blocks (h-g's/ s-b's) as shown below:

approx. present population of sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 1200	1*
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	...

*(i.e., no h-g/ s-b formation)

6.7.2 For rural areas of Himachal Pradesh, Sikkim and Nagaland, and Poonch, Rajouri, Udhampur and Doda districts of Jammu and Kashmir, the number of hamlet-groups formed was as follows:

approx. present population of sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 600	1*
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	...

*(i.e., no h-g/ s-b formation)

6.7.3 Hamlet-groups/ sub-blocks were formed by more or less equalising population. Two hamlet-groups/ sub-blocks were selected from a large village/ block by SRSWOR. Listing and selection of the households was done independently in the two selected hamlet-groups/ sub-blocks so formed.

6.8 Formation of second-stage strata (SSS):

6.8.1 Rural

6.8.1.1 From the data of NSS 48th round, households having land area 0.005 hectares or more were considered. Two cut-off points, X and Y, were determined at State/UT level in such a way that 40% of these households possessed land area less than X, 40% possessed land area between X & Y and 20% possessed land area greater than Y.

6.8.1.2 For the land and livestock holdings survey (Sch. 18.1) of the 59th round, four second-stage strata (SSS) were formed in the rural sector as follows:

- SSS 1: households with land less than 0.005 hectare
- SSS 2: households with land equal to or more than 0.005 hectares but less than X
- SSS 3: households with land equal to or more than X but less than Y
- SSS 4: households with land equal to or more than Y

Table 1: The values of cut-off points X and Y of land possessed (in hectares) for each State/UT

State/UT	X	Y	State/UT	X	Y
(1)	(2)	(3)	(1)	(2)	(3)

Manipur	0.299	1.052	Lakshadweep	0.081	0.182
Meghalaya	0.538	1.348	Pondicherry	0.016	0.421
Mizoram	0.567	1.214			

6.8.2 Urban

6.8.2.1 Four second-stage strata (SSS) were formed as follows: First, three cut-off points, viz. A, B & C, at State/UT level were determined using NSS 55th round data in such a way that 30% of the households had MPCE less than A, 30% had MPCE more than or equal to A but less than B, 30% had MPCE more than or equal to B but less than C and the remaining 10% of the households had MPCE more than or equal to C.

6.8.2.2 The SSS for Sch. 18.1 in the urban sector were as follows:

- SSS 1: households with MPCE less than A
 SSS 2: households with MPCE equal to or more than A but less than B
 SSS 3: households with MPCE equal to or more than B but less than C
 SSS 4: households with MPCE equal to or more than C

Table 2: The values of the cut-off points (A, B & C) of monthly per capita expenditure (in rupees) for urban sector for each State/UT

State/UT.	A	B	C	State/UT	A	B	C
(1)	(2)	(3)	(4)	(1)	(2)	(3)	(4)
Andhra Pradesh	479	719	1405	Nagaland	931	1220	1906

Meghalaya	729	902	1538	Pondicherry	531	770	1388
Mizoram	781	1047	1702				

6.9 Allocation and selection of sample households: Eight sample households were allocated to each sample FSU. In case of no hamlet-group formation, two households were selected from each of the four second-stage strata. In case of hamlet-group formation, one household was selected from each SSS of each hamlet-group. Sample households were selected by SRSWOR in each SSS of each hamlet-group.

7. Estimation procedure

7.1 Notations:

s = subscript for stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU

d = subscript for a hamlet-group (d = 1, 2)

j = subscript for second-stage stratum of an FSU/ h-g/ s-b

k = subscript for sample household of a particular second-stage stratum within an FSU/ h-g/ s-b

D = total number of h-g's formed in the sample FSU

$D^* = 1$ if $D = 1$

= D_2 for FSU's with $D > 1$

N = total number of FSU's in stratum 1

Z = total size of a stratum other than stratum 1 (= sum of sizes for all the FSU's of a stratum other than stratum 1)

z = size of sample FSU used for selection.

n = number of sample FSU's surveyed including zero cases but excluding casualty for a particular sub-sample and stratum.

H = total number of households listed in a second-stage stratum of a h-g/s-b of the sample FSU

h = number of households surveyed in a second-stage stratum of a h-g/s-b of the sample FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y.

In terms of the above symbols,

y_{smidjk} = observed value of the characteristic y for the kth household in the jth second stage stratum of the dth h-g (d = 1, 2) of the ith FSU belonging to the mth sub-sample for the sth stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum:

Rural:

Estimation formula for stratum 1:

(i) For households selected in jth second stage stratum (j=1, 2, 3 or 4):

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for other strata:

(i) For households selected in jth second stage stratum (j=1,2,3 or 4):

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Urban:

(a) Estimation formula for a stratum:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) *Estimates in respect of joint operational holdings:* In the case of joint operational holdings operated by the sample household jointly with other household(s), the value of a characteristic of the operational holding is first multiplied by the percentage share of land of the sample household(s) and then the higher estimates are built up.

7.3 Overall estimate of aggregates for a stratum:

Overall estimate for an aggregate for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

7.3.1 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

7.4 Estimates of ratios :

Let \hat{Y} and \hat{X} be the overall estimate of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

7.5 Estimates of Error:

The variances of the above estimates are estimated as follows:

A) For aggregate \hat{Y} :

$$\hat{V}ar(\hat{Y}) = \sum_s \hat{V}ar(\hat{Y}_s) \text{ where } \hat{V}ar(\hat{Y}_s) \text{ are as given below.}$$

- a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$\hat{V}ar_{ppswr}(\hat{Y}_s) = \sum_j \hat{V}ar(\hat{Y}_{sj})$$

$$\text{where } \hat{V}ar_{ppswr}(\hat{Y}_{sj}) = \frac{1}{n_{sj}(n_{sj} - 1)} \left[\sum_{i=1}^{n_{sj}} \frac{Z_s^2 \hat{Y}_{sij}^2}{z_{si}^2} - n_{sj} \hat{Y}_{sj}^2 \right]$$

$$\hat{Y}_{sij} = D_{si}^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

- b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1 and all urban strata):

$$\hat{V}ar_{srswor}(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$$

where \hat{Y}_{s1} and \hat{Y}_{s2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's'.

- B) For ratio \hat{R} :

$$\hat{M}\hat{S}E(\hat{R}) = \frac{1}{(\hat{X})^2} \left[\sum_s \hat{M}\hat{S}E_s(\hat{R}) + \sum_{s'} \hat{M}\hat{S}E_{s'}(\hat{R}) \right]$$

where s, s' indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

- a) For strata with PPSWR selection at first stage (i.e. for all rural strata except stratum 1):

$$\hat{M}\hat{S}E_s(\hat{R}) = \frac{1}{n_s(n_s - 1)} \sum_{i=1}^{n_s} \left[\frac{Z_s}{z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) - \frac{1}{n_s} \sum_{i=1}^{n_s} \frac{Z_s}{z_{si}} (\hat{Y}_{si} - \hat{R}\hat{X}_{si}) \right]^2$$

where

$$\hat{Y}_{si} = \sum_j \hat{Y}_{sij} , \quad \hat{X}_{si} = \sum_j \hat{X}_{sij} ,$$

$$\hat{Y}_{sij} = D_{si}^* \left[\frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} y_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} y_{si2jk} \right] ,$$

$$\hat{X}_{sij} = D_{si}^* \left[\frac{H_{si1j}}{h_{si1j}} \sum_{k=1}^{h_{si1j}} x_{si1jk} + \frac{H_{si2j}}{h_{si2j}} \sum_{k=1}^{h_{si2j}} x_{si2jk} \right]$$

b) For strata with SRSWOR selection at first stage (i.e. for rural stratum 1 and all urban strata):

$$M\hat{S}E_{s'}(\hat{R}) = \frac{1}{4} \left[(\hat{Y}_{s'1} - \hat{Y}_{s'2})^2 + \hat{R}^2 (\hat{X}_{s'1} - \hat{X}_{s'2})^2 - 2\hat{R}(\hat{Y}_{s'1} - \hat{Y}_{s'2})(\hat{X}_{s'1} - \hat{X}_{s'2}) \right]$$

C) Estimates of RSE:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

7.6 Multipliers:

The formulae for multipliers for a sub-sample are given below:

stratum	formula for multipliers	
	hg / sb 1	hg / sb 2
rural stratum 1 and all urban strata	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}},$ j = 1, 2, 3, 4	$\frac{N_s}{n_{sm}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$ j = 1, 2, 3, 4
rural s ≠ 1	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi1j}}{h_{smi1j}},$ j = 1, 2, 3, 4	$\frac{Z_s}{n_{sm}} \times \frac{1}{z_{smi}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}},$ j = 1, 2, 3, 4

Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, an indicator variable is used.

(ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

7.7 Treatment for zero cases, casualty cases etc.

7.7.1 While counting the number of FSU's surveyed (n_{sm}) in a stratum, all the FSU's with survey codes 1 to 6 in listing schedule 0.0 are considered. In addition, if no household is available in the frame, the FSU is still treated as surveyed. However, if households are available in the frame of the FSU but none of them could be surveyed, then that FSU is treated as casualty.

7.7.2 *Casualty cases.* FSU's with survey code 7 as per listing schedule 0.0 are treated as casualties. In addition to this, an FSU, although surveyed, may have to be treated as casualty for a particular schedule type and a particular *second-stage stratum* as explained in the next paragraph.

7.7.3 FSU's with survey codes 1 and 4 as per listing schedule having number of households in the frame of j^{th} second-stage stratum greater than 0 but number of households surveyed

according to data file, considering both h-g/s-b's together, as nil (i.e. $H_{11j} + H_{12j} > 0$ but $h_{11j} + h_{12j} = 0$) are taken as casualties for j^{th} second-stage stratum.

7.7.4 All the FSU's with survey codes 1 to 6 as per listing schedule minus the number of casualties as identified above are taken as the number of surveyed FSU's (n_{smj}) for that stratum \times second stage stratum.

7.7.5 When casualty for j^{th} second stage stratum occurs for a particular h-g/s-b but not for the other h-g/s-b, the FSU is not treated as casualty, but some adjustments in the value of H for the other h-g/s-b are done as follows:

- (i) Suppose for h-g/s-b 1, $H_{11j} > 0$ but $h_{11j} = 0$ while for h-g/s-b 2, $H_{12j} > 0$ and $h_{12j} > 0$. In that case $D_i^* \times H_{12j}$ is replaced by $H_{11j} + D_i^* \times H_{12j}$ in the formula for multiplier of segment 2.
- (ii) Suppose for h-g/s-b 1, $H_{11j} > 0$ and $h_{11j} > 0$ while for h-g/s-b 2, $H_{12j} > 0$ but $h_{12j} = 0$. In that case H_{11j} is replaced by $H_{11j} + D_i^* \times H_{12j}$ in the formula for multiplier of h-g/s-b 1.

It may be noted that n_{smj} will be the same for h-g/s-b 1 & 2 of an FSU.

7.8 Treatment in cases of void second-stage strata/sub-strata /strata/NSS region at FSU or household level

7.8.1 A stratum may be void because of the casualty of all the FSU's belonging to the stratum. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then the estimate for the void stratum is replaced with the estimate obtained from the other sub-sample for the same stratum.

7.8.2 When a stratum is void in both the sub-samples, the following procedure is used:

Case (I): Stratum void cases at FSU levels (i.e. all FSU's having survey code 7):

- i) If a stratum, other than stratum 1, is void then it may be merged with a similar stratum within the same NSS region. However, if stratum 1 is void for any State/UT, it is not merged with any other stratum.
- ii) If all the strata within an NSS region are void, it is regarded as excluded from the coverage of the survey. The state-level estimates are based on the estimates of NSS regions for which estimates are available.

Case (II): Stratum void case at second-stage stratum level (i.e. all the FSU's are casualties for a particular second-stage stratum):

An FSU may be a casualty for a particular *second-stage stratum* although survey code is not 7. If all the FSU's of a stratum become casualties in this manner for a particular *second-stage stratum*, the stratum becomes void. The adjustment for this type of stratum void case is done according to the following guidelines.

The adjustment is made involving other strata (within NSS region) of the State/UT. Suppose A, B, C, and D are the four strata in the State/UT/Region and stratum C is void for j^{th} *second stage stratum*. If \hat{Y}_{aj} , \hat{Y}_{bj} and \hat{Y}_{dj} are the aggregate estimates for the strata A, B and D respectively, then the estimate \hat{Y}_{cj} for stratum C is obtained as

$\left(\frac{\hat{Y}_{aj} + \hat{Y}_{bj} + \hat{Y}_{dj}}{Z_a + Z_b + Z_d} \times Z_c \right)$ where Z_a , Z_b , Z_c and Z_d are the sizes of strata A, B, C and D respectively.
